AMENDMENT TO THE CLAIMS

Prior to the present communication, claims 1–16 and 28–29 were pending in the above-identified application. All claims currently pending and under consideration in the above-identified application are shown below. Claim 1, 5-7, and 28 are currently amended. This listing of claims will replace all prior versions and listings of claims in the above-identified application.

Listing of Claims:

1. (Currently Amended) A system comprising:

a markup language core engine for providing categories of behaviors including layout and rendering behaviors;

at least one external component designed to provide categories of external component behaviors including at least one of an external component layout behavior and an external component rendering behavior in addition to the behaviors provided by the core engine, wherein the external component layout behavior and the external component rendering behavior are one of an attached behavior or an element behavior;

a pair of interfaces associated with each external component for communication between the external component and the core engine;

a mechanism included in the core engine to extend a selected category of behavior of the core engine with the behaviors of a same category of the at least one external component, such that the behaviors of the same category of the at least one external component participate with the behaviors of the core engine, wherein the mechanism and the at least one external component communicate through the pair of interfaces to confirm participation, and participation

includes the at least one external component delegating a portion that is less than all of a processing of the behaviors of the same category to the core engine; and

an output medium to render and layout visual elements as a result of the participation among the markup language core engine and the at least one external component.

- 2. (Previously Presented) The system of claim 1, wherein first interface of each pair is exposed by the external component for querying by the mechanism, and a second interface of each pair is exposed by the mechanism for querying by the external component.
- 3. (Original) The system of claim 1, wherein the behaviors provided by one of the at least one external component override comparable behaviors of the core engine.
- 4. (Original) The system of claim 1, wherein the behaviors provided by one of the at least one external component complement comparable behaviors of the core engine.
- 5. (Currently Amended) The system of claim 1, wherein the behaviors provided by one of the at least one external component are attached behaviors that can be applied and subsequently removed.
- 6. (Currently Amended) The system of claim 1, wherein the behaviors provided by one of the at least one external component are element behaviors that are permanently applied.
- 7. (Currently Amended) A method performed by a mechanism for extending a behavior of a core engine with a behavior of an external component, both the core engine behavior and the external component behavior belonging to a same category of behavior, the

Appl. No. 09/677,403

Amdt. Dated 21 August 2007

Resp. to Office Action of 19 April 2007

category being at least one of a layout behavior and a rendering behavior, the method

comprising:

calling a behavior initialization method of the external component to determine how the

behavior of the external component participates with the behavior of the core engine, wherein the

core engine behavior and the external component behavior belong to the same category of

behavior, and participation includes the at least one external component delegating a portion that

is less than all of a processing of the core engine behavior and the external component behavior

to the core engine in a first mode, and participation further includes replacing the core engine

behavior with the external component behavior in a second mode;

calling a behavior method of the external component for the external component to

provide the behavior of the external component when the core engine is providing the behavior

of the core engine, so that the behavior of the external component participates with the behavior

of the core engine;

receiving a call to a corresponding behavior method of the mechanism for the external

component to communicate with the core engine during participation of the behavior of the

external component with the behavior of the core engine, wherein the external component

behavior is one of an attached behavior or an element behavior; and

rendering a number of layers based on the participation among the external component

and the core engine.

8. (Original) The method of claim 7, wherein the mechanism is part of the core

engine.

Appl. No. 09/677,403 Amdt. Dated 21 August 2007

Resp. to Office Action of 19 April 2007

9. (Previously Presented) The method of claim 7, wherein the behavior is a layout

behavior.

10. (Original) The method of claim 9, wherein the behavior is fully delegated to the

external component from the core engine, which is specified by the external component in

response to calling the behavior initialization method of the external component.

The method of claim 9, wherein the behavior 11. (Previously Presented)

implemented by the external component is called after a comparable behavior of the core engine

is performed, which is specified by the external component in response to calling the behavior

initialization method of the external component.

12. (Previously Presented) The method of claim 7, wherein the behavior is a

rendering behavior.

13. (Original) The method of claim 12, wherein rendering by the behavior of the

external component replaces rendering by the comparable behavior of the core engine, which is

specified by the external component in response to calling the behavior initialization method of

the external component.

14. (Original) The method of claim 12, wherein rendering by the behavior of the

external component intersperses with rendering by the comparable behavior of the core engine,

which is specified by the external component in response to calling the behavior initialization

method of the external component.

Amdt. Dated 21 August 2007
Peop. to Office Action of 10 April 2

Resp. to Office Action of 19 April 2007

15. (Original) The method of claim 7, further initially comprising calling a query

method of the external component implementing the behavior.

16. (Original) The method of claim 7, wherein the method is performed by execution

of a computer program from a computer-readable medium by a processor.

Claims 17–27 (Canceled)

28. (Currently Amended) A computer-readable medium having one or more

computer programs stored thereon for execution by a processor comprising:

a markup language core engine for providing categories of behaviors including layout

and rendering behaviors;

at least one external component designed to provide categories of external component

behaviors including at least one of an external component layout behavior and an external

component rendering behavior in addition to the behaviors provided by the core engine, wherein

the external component layout behavior and the external component rendering behavior are one

of an attached behavior or an element behavior;

a pair of interfaces associated with each external component for communication between

the external component and the core engine;

a mechanism included in the core engine to extend a selected category of behavior of the

core engine with the behaviors of a same category of the at least one external component, such

that the behaviors of the same category of the at least one external component participate with

the behaviors of the core engine, wherein the mechanism and the external component

communicate through the pair of interfaces, and participation includes the at least one external

component delegating a portion that is less than all of a processing of the behaviors of the same

category to the core engine; and

an output medium to render and layout visual elements as a result of the participation

among the markup language core engine and the at least one external component.

29. (Previously Presented) The computer-readable medium of claim 28, wherein a

first interface of each pair is exposed by the external component for querying by the mechanism,

and a second interface of each pair is exposed by the mechanism for querying by the external

component.

Claims 30-32 (Canceled)
